

Stuff to Still Figure Out

How do we get feedback from the user?

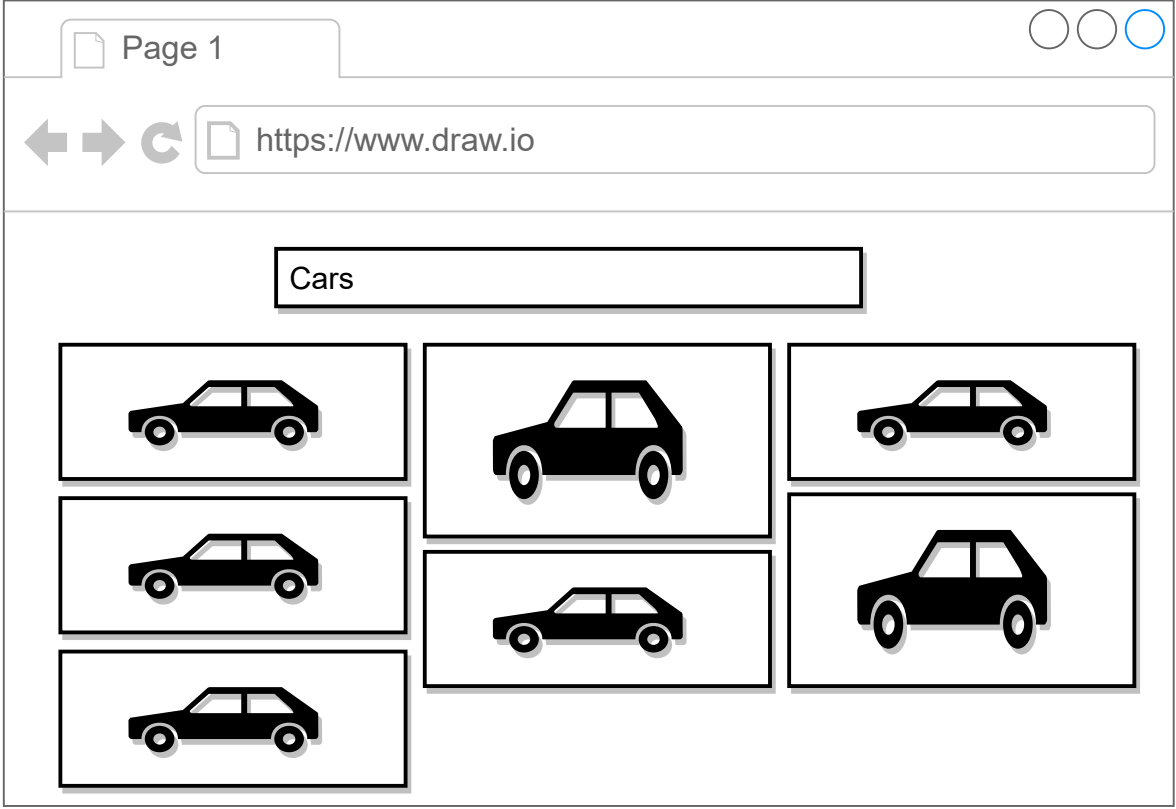

How do we fetch data from some outside API or server?

How do we show lists of records?

V1  
Implementation

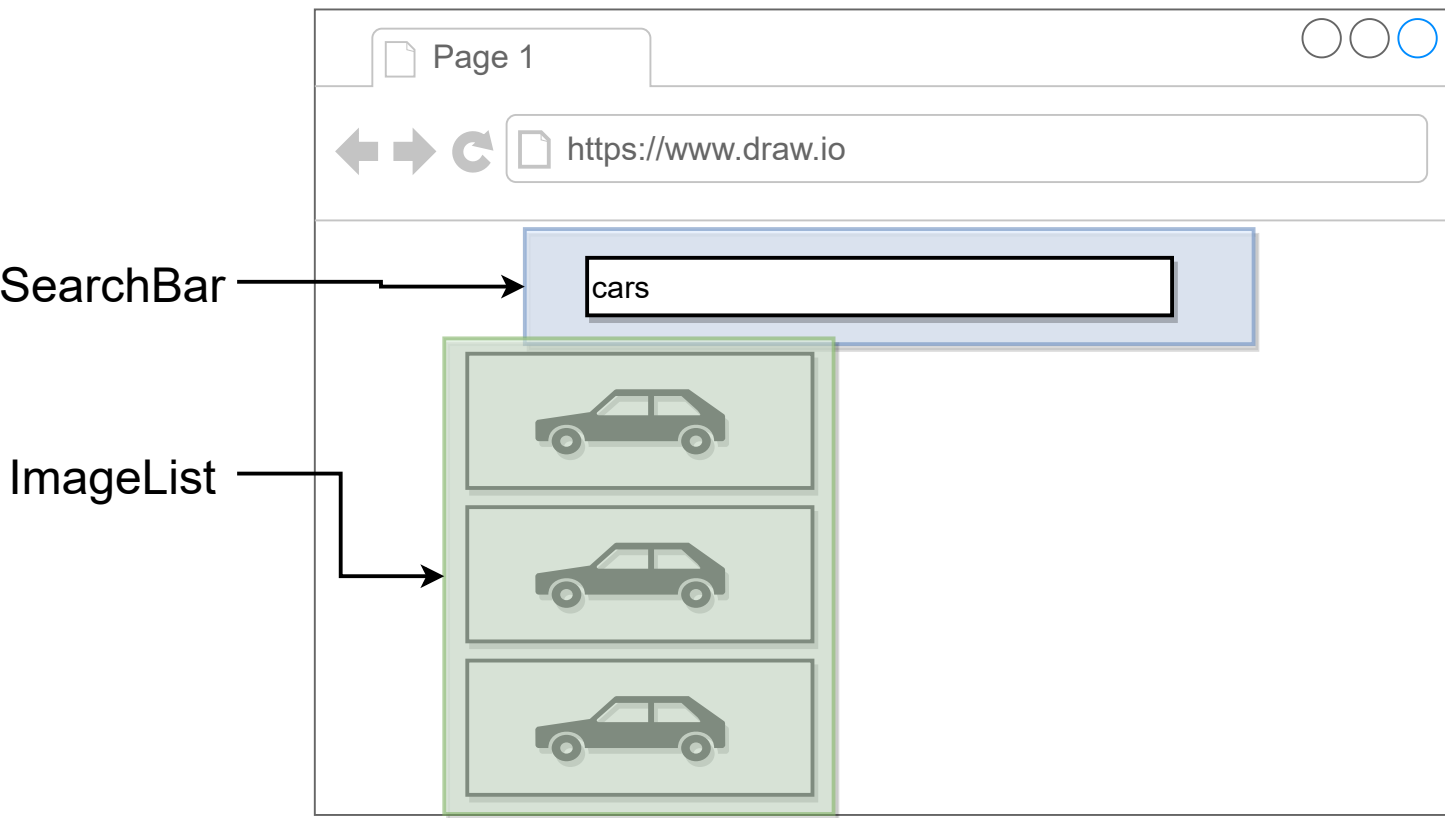

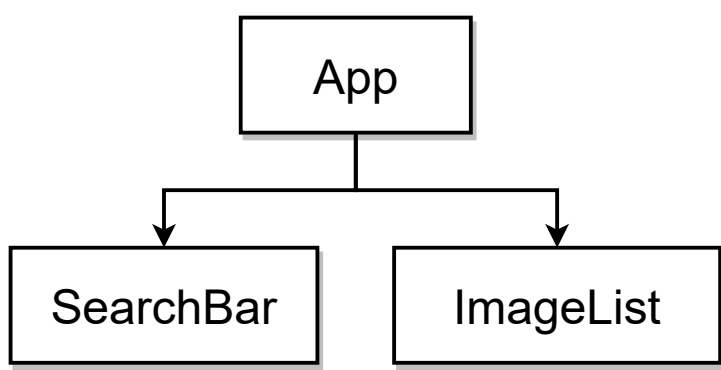

V2  
Implementation

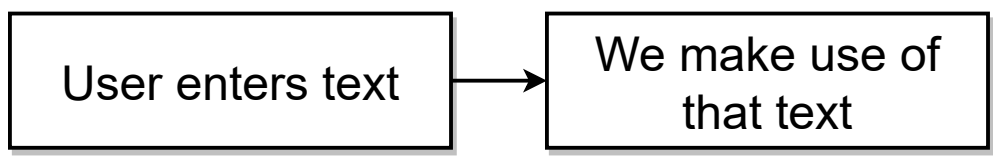

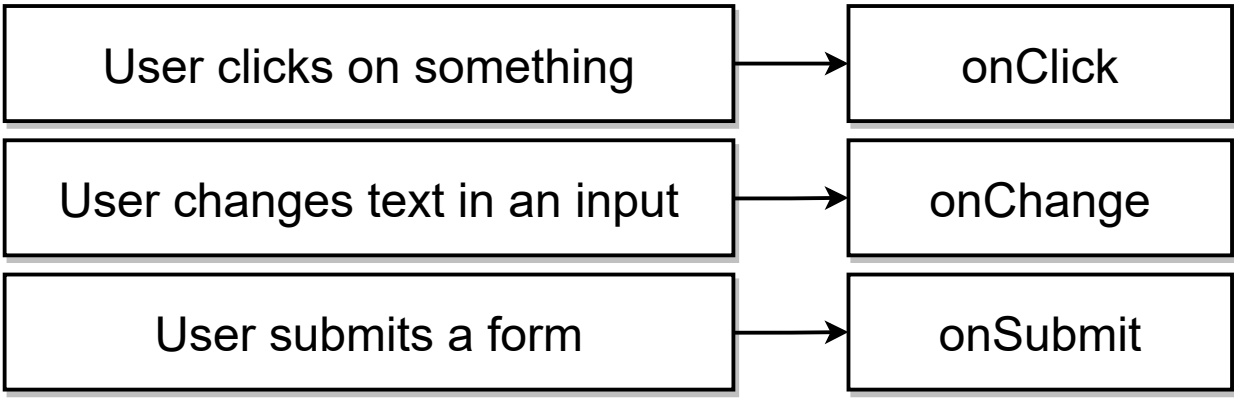

App Challenges

- Need to get a search term from the user
- Need to use that search term to make a request to an outside API and fetch data
- Need to take the fetched images and show them on the screen in a list

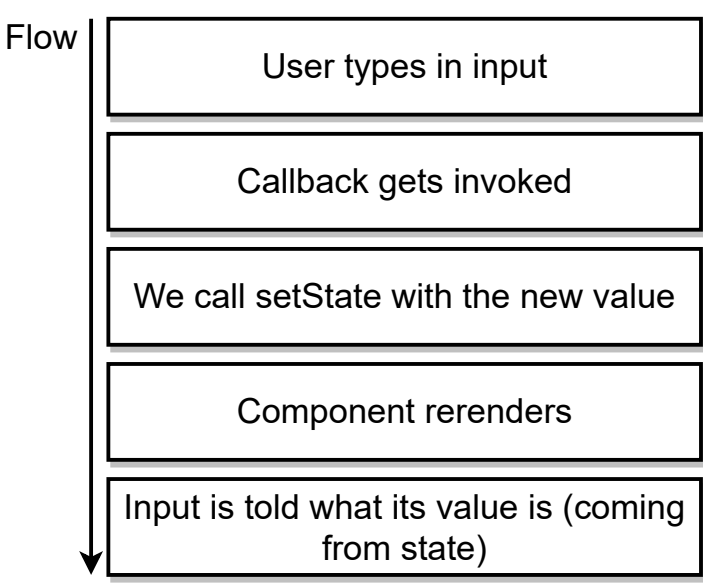

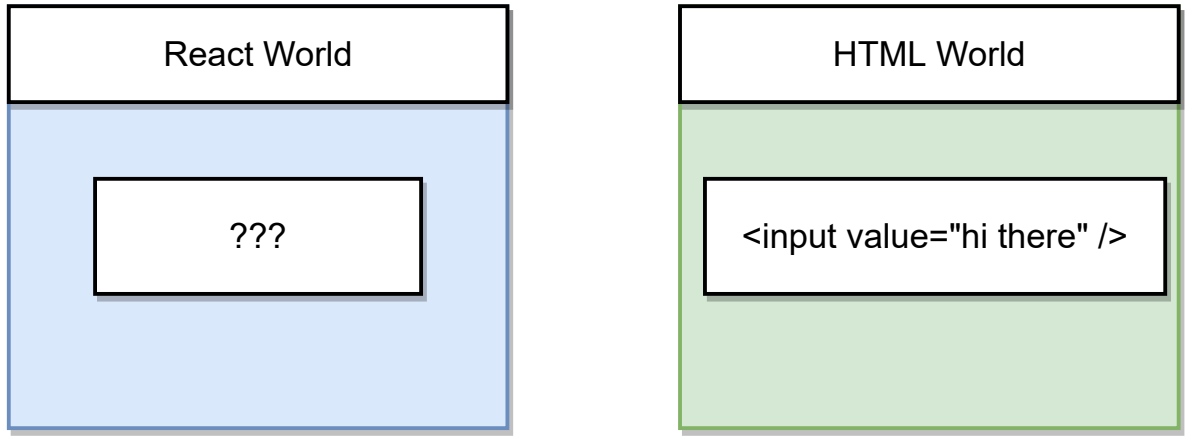

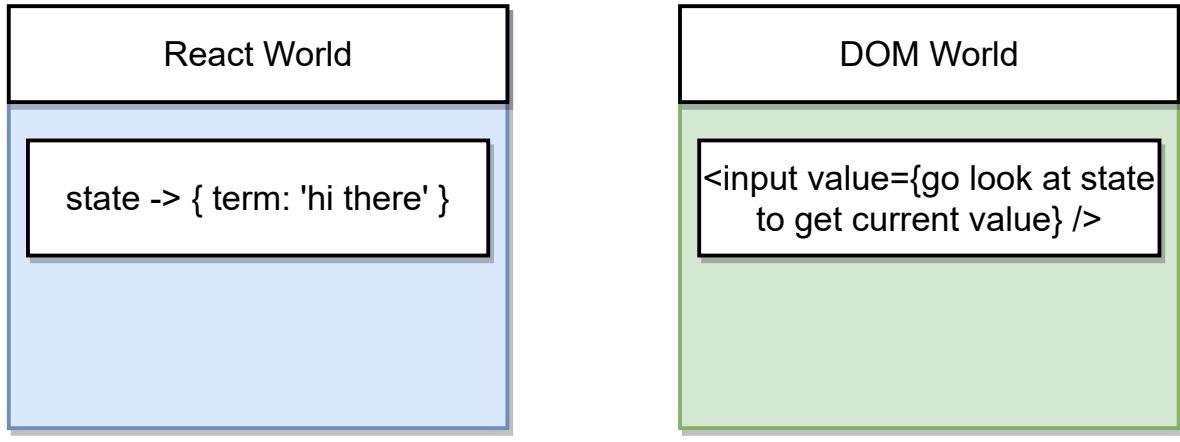

Controlled vs Uncontrolled

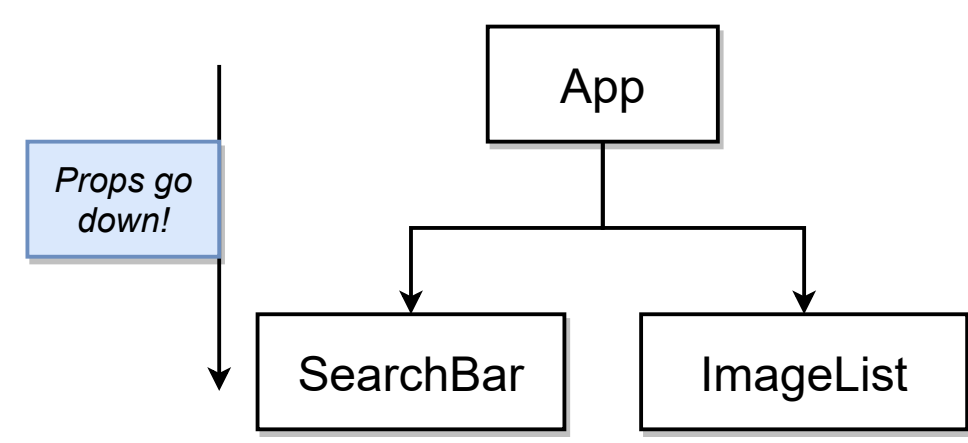

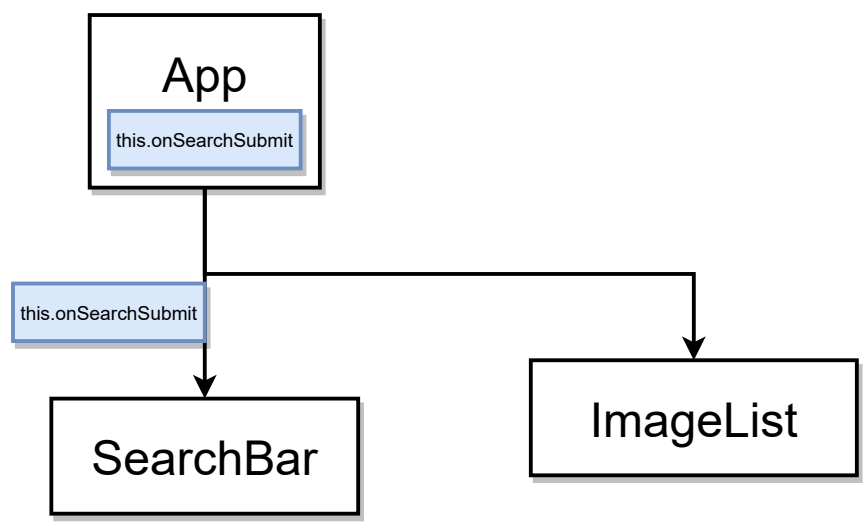

Before refactor to  
controlled!

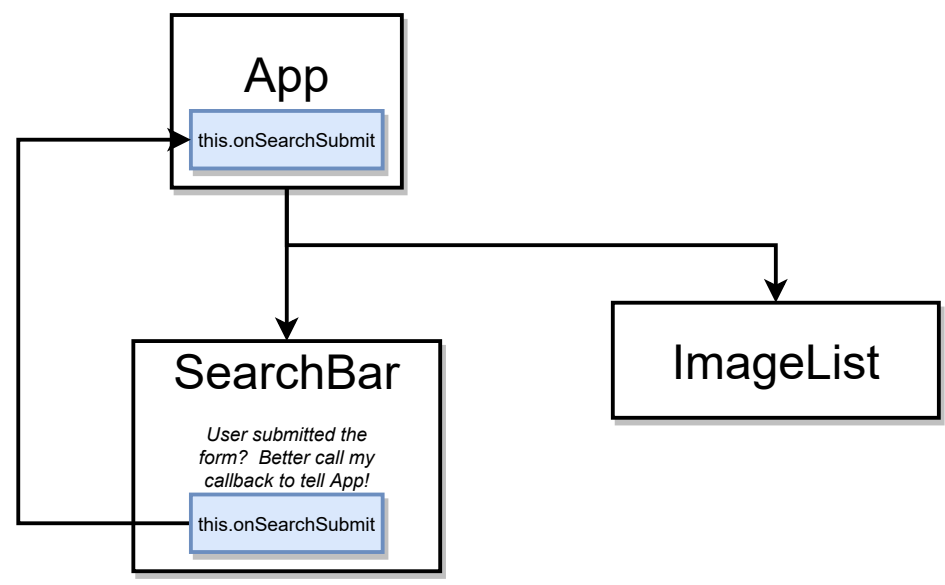

What's the value of the input *right now*?

What's the value of the input *right now*?

What is 'this' used for in a class?
