V What is React?

React is a Javascript front-end library. It is used to show content to users and handle user events. Engineers use React to create reusable components

> How do we show content with React?

> Why is React useful for engineers?

What We've Got So Far

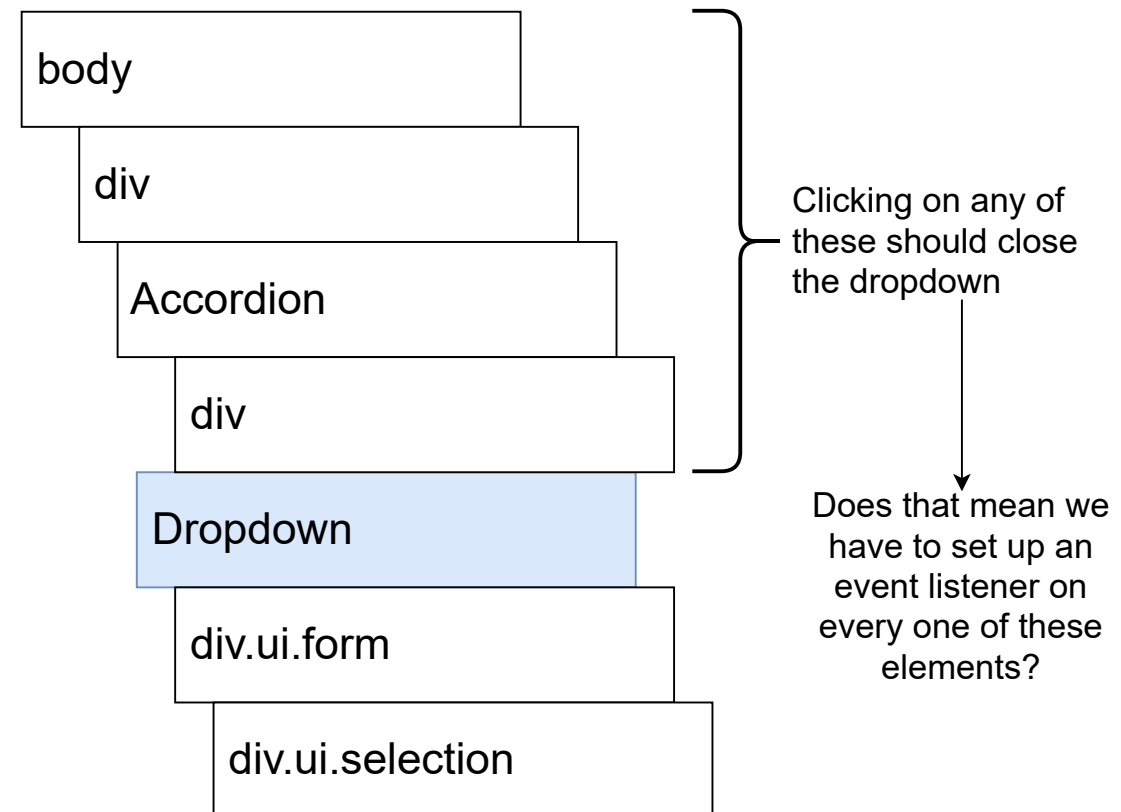

The Dropdown needs to detect a click event on *any element besides one it created*

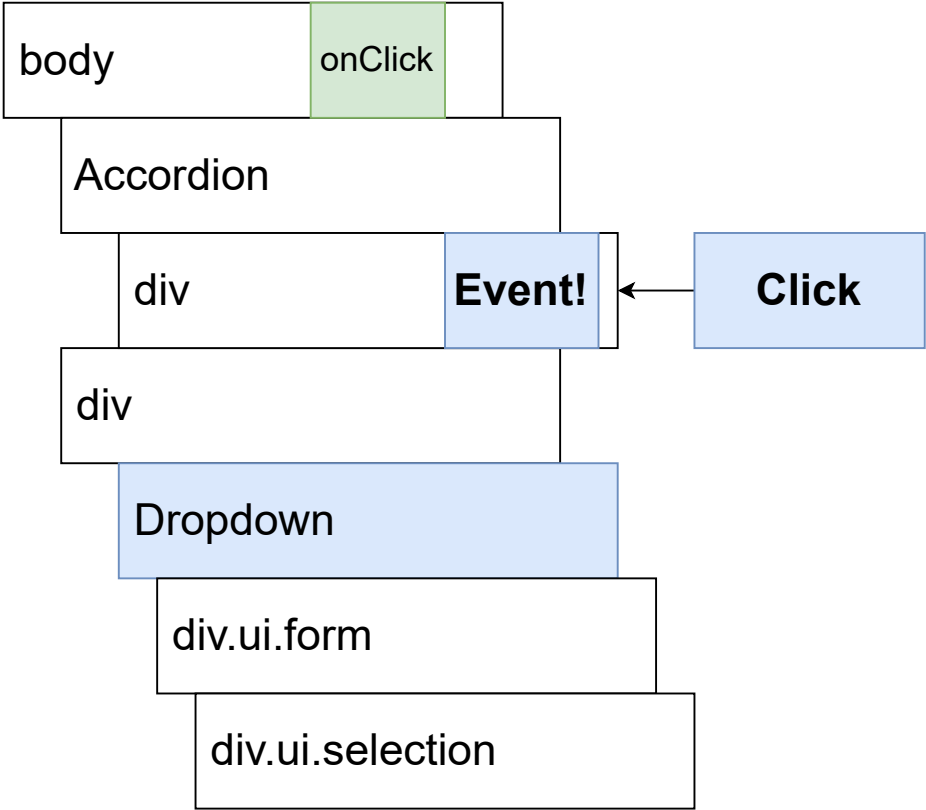

The Dropdown has a hard time setting up event handlers on elements that it does not create

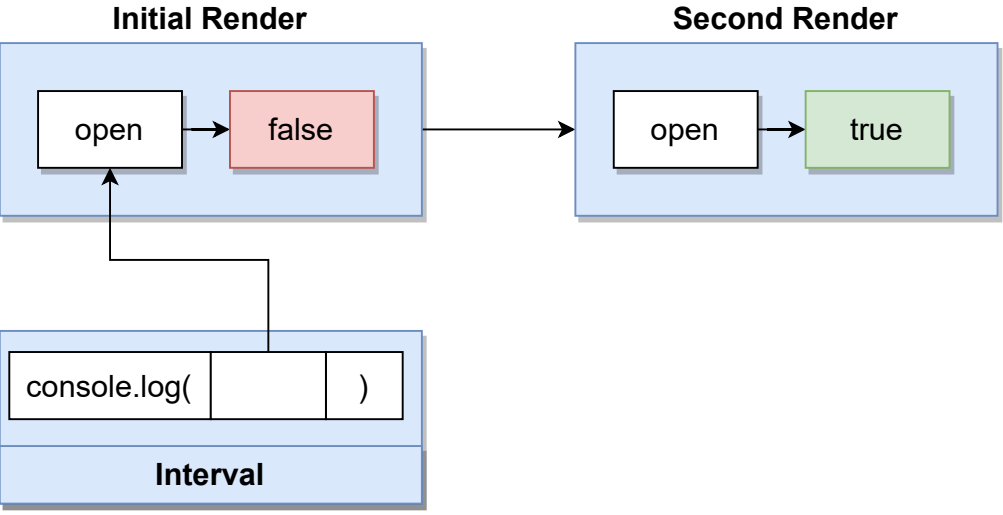

Event bubbling is a thing

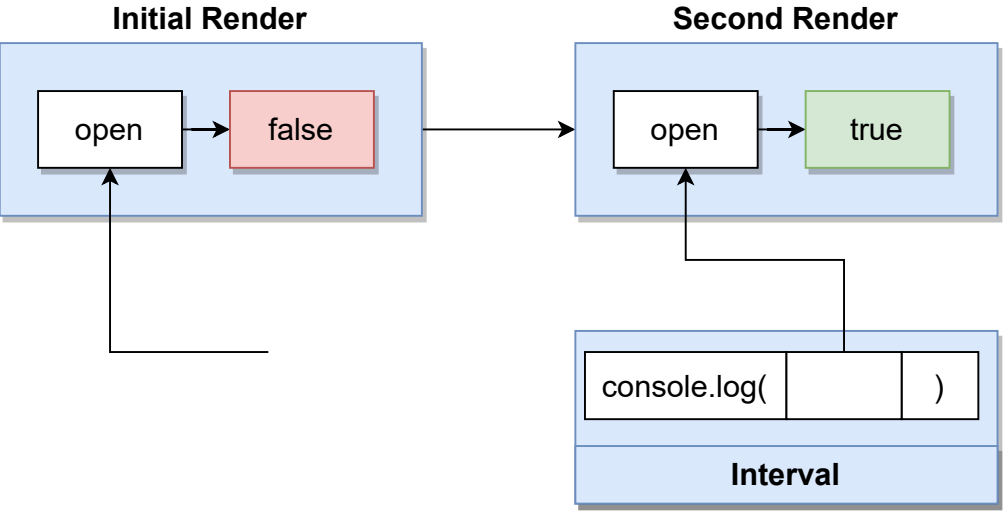

What We've Got So Far

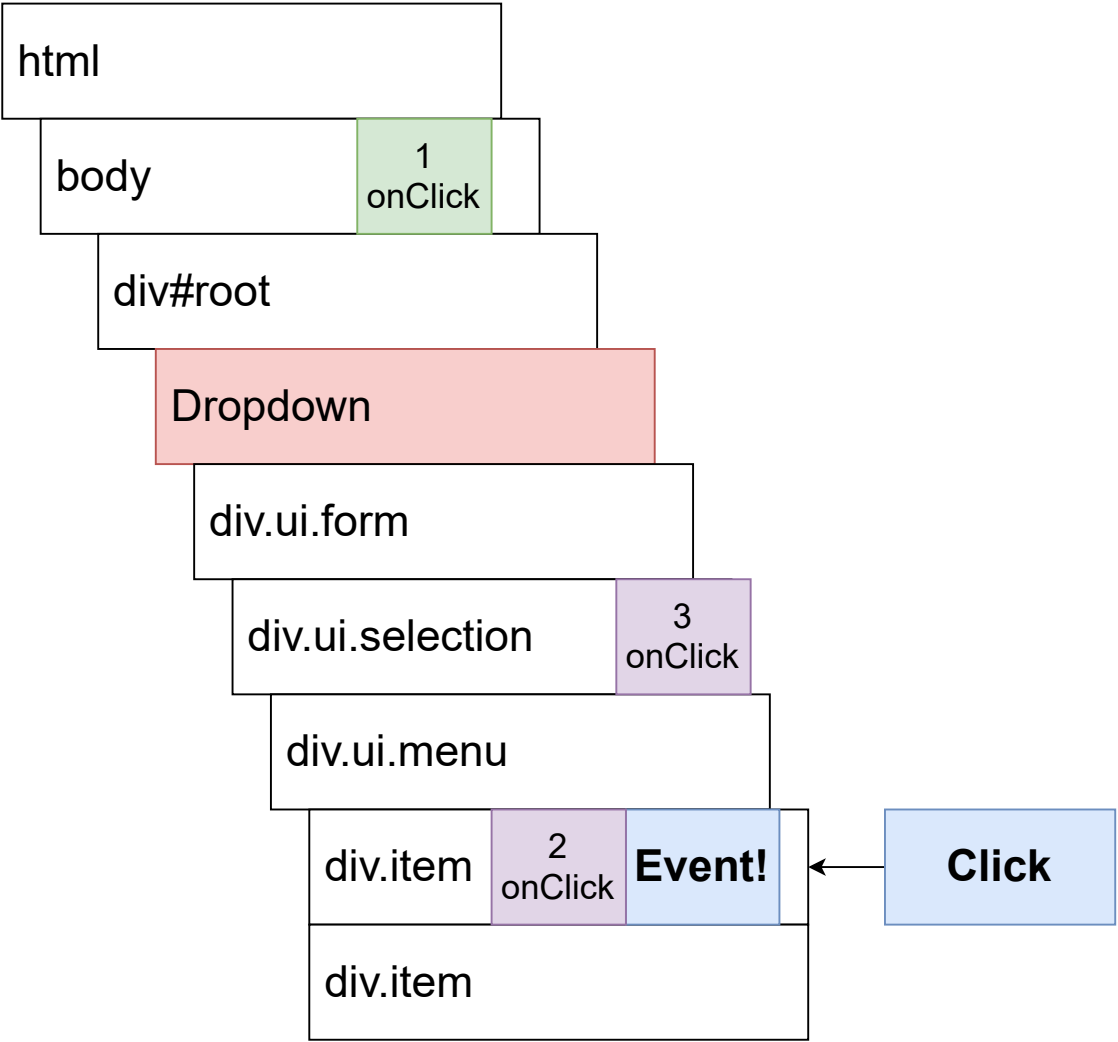

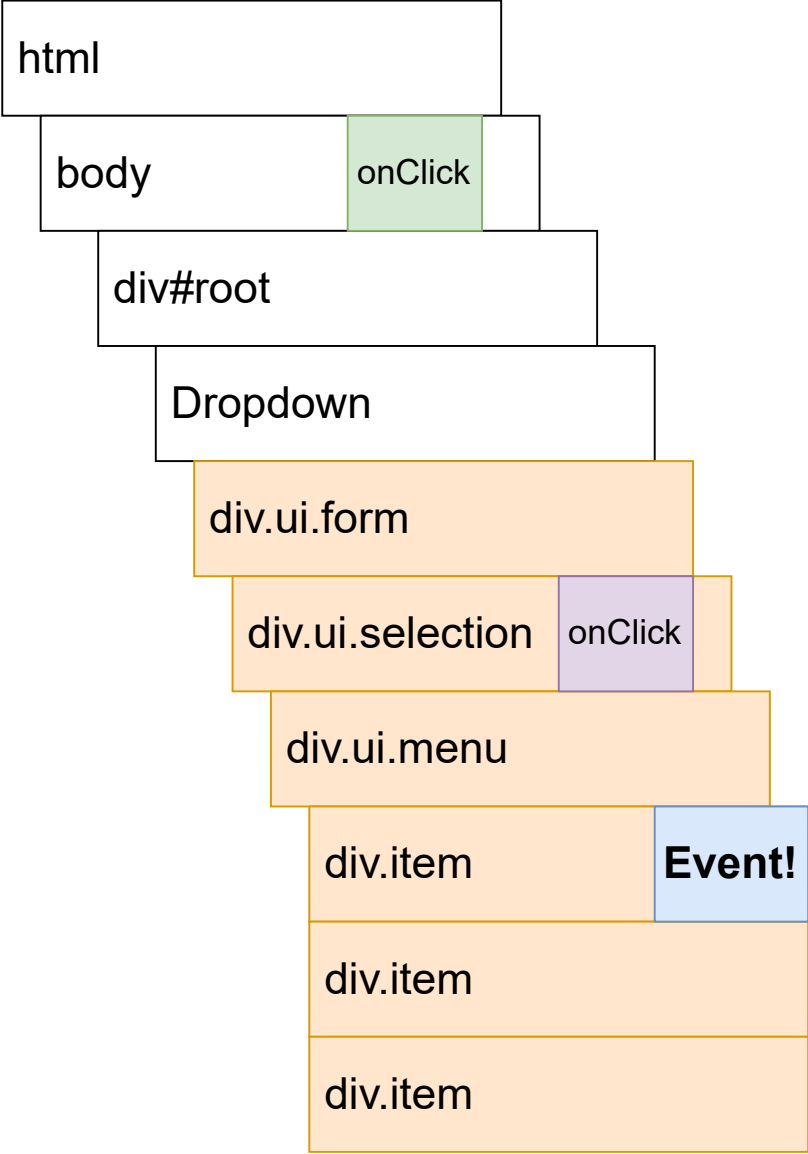

Scenario #1

User clicks on an element that is created by the Dropdown component

↓

If a user clicks on one of these elements, then we probably ***don't want the body event listener to do anything***

Click
